We were at Cheraw state park today and noticed that the water in the lake looks red. It was our first time there so I don't know if that is usual or not. What causes it to look red like that? And is it safe to swim in?

I was finally able to speak to a park ranger there. They say the water appears red due to the large amount of Cypress Tree leaves decomposing in the water. It is safe to swim in. Hope that answers your question. Thanks!
