Subject: Offshore drilling

As a georgetown constituent, I want to go on the record to oppose offshore seismic testing and drilling. The potential for damage far outweighs any benefit that may be realized and the damage to our coasts, wildlife and tourism would be catastrophic should a spill occur. It is time for republicans to address climate change and pursue alternative energy sources and no longer be the party of Big Oil. Clean air and water, and protecting the environment should not be a partisan issue!
