Subject: Kevin

Hi Catherine,

here are the points, which I would like Kevin to consider and propose.

- 1, I would like him to invest his political capital and time to make sure that H3079 pass in the SC house.
- 2, propose to enact tax credit or other tax benefits for residence and businesses for alternative energy installation.
- 3, propose to install solar energy on all state, county and city owned buildings. This should reduce expenses, which should help lower taxes. The saving should justify the initial expenses.
- 4, Let's court some solar panel manufacturer to put a plant in our state by giving them incentives. This will generate more manufacturing jobs for our state and thus more revenue.
- 5, We should never be in fiasco like SCANA again. Nuclear plants and the toxic waste it generates, is very costly and dangerous. Just look at SRS.
- 6, We do get abundant amount of sunshine, which does not cost anything. Why don't we use it to our advantage.
- 7, Why don't you propose to abolish vehicle property tax. Let's match NC, GA and TN.

I'll email you again after discussing current affair with fellow businesspeople and my daughter, who is in college.

Appreciate the chance to voice my concerns.

Take care and good luck.

Ben
