**Committee:**

Education and Public Works

November 10, 2002

Enclosed is draft data for a study undertaken to assess retention and graduation rates for public institutional student cohorts (1988 to 1995) Study Phase I and for freshman admissions for public institutions (1994 to 2001) Study Phase II.

A third study phase for public institutional faculty dealing with faculty class loads and other faculty obligations is in process (completed for South Carolina) as an example.

Each area of the study is explained. If there are any critique comments concerning sources or interpretations of data, please advise me. I wish to have the study as accurate and reliable as possible.

Part of this study relates to those cohorts on four-year institutional campuses who will never graduate. To my knowledge this is the first time negative rates and cost information have been looked at in this way. The cost data for each state come from Research Associates of Washington. This cost data may be deflated because it includes all levels of post secondary allocation costs per student including two-year and graduate students. Trying to find each state's funding level for undergraduates on the four-year campus has proved to be an elusive piece of information.

Again, I remind you I am open to any and all suggestions. These graduation data do not include state graduation rates for transfers to another institution within a state. Transfer students graduation rates may increase a state's rate by 3.6%.

Our goal is quality public higher education for those who pay the costs--the student, parent and the taxpayer.

Sincerely,

A handwritten signature in cursive script that reads "Harry Stille".

Dr. Harry Stille, Chairman  
Post-Secondary Sub-Committee  
House Education and Public Works

## SOURCES ON DATA

### GRADUATION – RETENTION RATE INFORMATION – TO NATIONAL DATA

**Undergraduate Full Time Cohorts Enrollment**

**Undergraduate Freshman Full Time Cohort Enrollment**

**Institution**

**Retention Rates – Sophomore – Junior – Senior Percent Who Return**

**Graduation Rate – Cohorts Who Entered in 1988 through 1995 and Graduate in Four Years, Five Years (when available) and Six Years. (Native student graduation rates)**

**Class Institution – Money's Best Colleges – September 1996, pg. 138**

**Student Academic Level. When reporting on the most recent entering class, schools assign a score from 1 to 5 to the typical freshman:**

1. Student is from top 20% of high school class, has a GPA of B+ or better and SAT scores above 1,200 or ACT scores above 28.
2. Top 40% of high school class; GPA of B or better, SAT scores between 1,100 and 1,199, ACT scores of 27 to 28.
3. Top half of class; GPA of B- or better, SAT scores between 950 and 1,099, ACT scores of 23 to 26.
4. Top 60% of class; GPA of C or better, SAT scores between 800 and 949, ACT scores of 19 to 22.
5. Grades/scores lower than above.

**Admissions Selectivity Rating. (Princeton Review-Time) pg. 98 – 2001 Edition**

**A general assessment determined by class rank, average test score, acceptance rate, enrollees. Scale (90-100-mega selective), (80-90 highly selective), (70-79 – selective), and under 70 – not selective.**

## **SUMMARY CONCLUSIONS OF STUDY PHASE I**

### **GRADUATION AND RETENTION RATES**

Graduation and retention rates at four public institutions are only considered for those freshman cohorts who enter at any given year and are tracked through that entry institution. All cohorts are full time degree seeking first time freshman.

This study tracks these students and how many return as sophomores and finally graduate in six years or less. These are for years 1988 through 1995 cohorts.

It seems at most public institutions in the United States, administrators and faculty do not care much for that students "hang around" and take extra years to complete their degrees, or in many cases, never get a degree at all. Most states have more four year institutions in which the graduation rates are fifty percent or below than above. In the United States, there are thirty-two states having system wide graduation rates below fifty percent.

This means for these institutions and states over a six year period of freshman admissions, there are more students on campus any academic calendar year that will never graduate than those students who will graduate.

Cost analysis of non-graduates for each state are included. This cost does not include student/parent costs or federal or state grants and loans. Include these and you increase the non-graduation costs by three times -- about \$24 billion dollars nationally.

Sophomore retention rates in most instances are the key resource to admissions. Selecting better-qualified and prepared freshman applicants is rewarded in sophomore returnees. Some say graduation rates don't mean much. When a college has high rates, they use these data in promoting the institution, but if the graduation rates are low, there are always reasons they are of no value. Both retention and graduation rates are important in evaluating quality college education.

All students arrive having taken the same SAT/ACT tests and come from the same high schools, so there is no reason not to compare all public senior institutions. Academic quality should be the same for the first time full time degree-seeking students during any given year of entry.

These data speak for themselves.

## **SUMMARY CONCLUSIONS OF STUDY PHASE II**

### **FRESHMAN ADMISSIONS**

#### **PUBLIC INSTITUTIONS FALL OF 1994 TO 2001**

The quality of academic ability of the entering freshman cohort student is the key ingredient to future success and enhances the ability of these students to do college work and graduate.

There are too many students enrolled each year at public institutions who should never be on the four year campus as freshman. Those students less academically prepared should be tracked through the two year system where they can find better success in making the transition from high school to college.

The enclosed data clearly shows many unqualified students are coming to the four year campus unfit to do college required studies.

All across the United States, university people in their zest to keep campus student numbers up to meet budgets allow poorly academically prepared students to enter the four year system only to fail, drop out or withdraw, never to go back again.

The quality of the entering freshman class is noted in two pieces of data. The lower side 25<sup>th</sup> percentile SAT/ACT scores and the percent of those freshman enrolled who were in the top ten percent of their high school class. Also, in addition those freshman students enrolled who are in the lower 50<sup>th</sup> percent of their high school class. It is clear these latter group of students who are academically in the bottom half of their high school class should not be on the four year campus as freshman except in rare circumstances.

We must make the four year campus a place where qualified academically prepared freshman students are allowed to enter and succeed to graduation. Those other students can track through the two year system and if successful there, these students can then move on to the four year system.

The number of students from within their own home state is used to show the academic potential derived from taking the SAT or ACT test for entrance to college. Those students from states whose average test scores are poor on these tests should be more diligent in restricting lower half high school class graduates from entering the four year campus directly from high school.

## **STUDY PHASE II (CONTINUED...)**

**No four year campus should have an open admissions policy.**

**The whole system as it is now supports the bloated bureaucracy within the institutions and is excessively costly to taxpayers, students and parents.**

**The reason the combined means for the SAT or ACT test scores are shown is to denote how state scores compare for those years shown. Combined means also show all test takers from a state for that year.**

**For example, if South Carolina ranks 49<sup>th</sup> in combined SAT/ACT scores, it is even more important to limit those students who fall into their lower 50<sup>th</sup> percentile of the graduating class to enter the four year campus.**

## Comparative Institutional Listings

The purpose of the following ranks of public and private research institutions is to determine if there is any degree of correlation between the *U. S. News "Best Colleges 2000"* ranking of national universities. The *Time/Princeton Review "Best College for You 2000"* and The Freshman Academic Admissions Rank proposed by this research analyst.

The data enclosed indicates a correlation of .75 and a reliability of .56 for the comparison to the public sector institutions.

This data indicates a correlation of .94 and a reliability of .88 for the comparison to the private sector institutions.
