## South Carolina State Parks

at 19:00:00 on 4/10/2018 UTC

TIDBIT! A sure sign of spring is the flowering dogwood living up to its name! This attractive understory tree blooms before the leaves emerge, giving off a showy display of white among the dark trunks and limbs of other trees. The small flowers are actually greenish in color in a tight cluster surrounded by four white bracts, which are mistaken for petals. Songbirds and other wildlife relish the dogwood's bright, red fruits in the fall. Have you seen one blooming this year?
